EXPERIENCE

Independent Projects, Remote Operations Research & Web Developer

JAN 2026 - PRESENT

- Engineered a linear programming optimization engine to maximize cargo payload capacity and flight revenue under strict weight, volume, and balance constraints.
- Developed automated data pipelines utilizing DuckDB for high-performance querying of aviation, flight, and cargo datasets.
- Deployed a fully interactive web dashboard using Streamlit to translate complex mathematical optimization outputs into real-time operational decisions.

EDUCATION

Technical University of Kenya, Bachelor of Science in Information Science

PROJECTS

SkyCargo & Baggage Intelligence System Optimization & Analytics Platform

Built a production-ready web application combining DuckDB data processing and PuLP linear programming to automate flight dispatch calculations and asset allocation.

SKILLS

- Python, SQL, Operations Research, Mathematical Optimization
- Tableau, Data Visualization, DuckDB, Pandas, PuLP / Linear Programming
- Git, GitHub, VS Code, Streamlit Cloud, Web Deployment

LANGUAGES

- English, Native/Fluent, Full professional proficiency across technical and non-technical domains.
- Swahili, Native/Fluent, Full professional proficiency across technical and non-technical domains.
- French, A2 Proficiency, Conversational and technical reading competency.
